

Solution Highlights

Billing for voice VPN

- Controlled secure VPN access
- Flexible rating to fit any corporate needs
- Attract enterprise customers

VPN - reduced cost enterprise interconnectivity

Corporate decentralization is on the rise, and the interconnectivity needs of corporations are increasing. Remote employees and business travelers need to be in frequent, close contact with the different parts of the corporation.

Voice VPN (Virtual Private Network) technology enables an organization to extend its VoIP network and reduce the cost of calling to remote users, branch offices and partner companies.

The voice VPN service is becoming one of the most important voice services for enterprise communication. By supporting

MIND-iPhonEX[®]
Billing & Customer Care

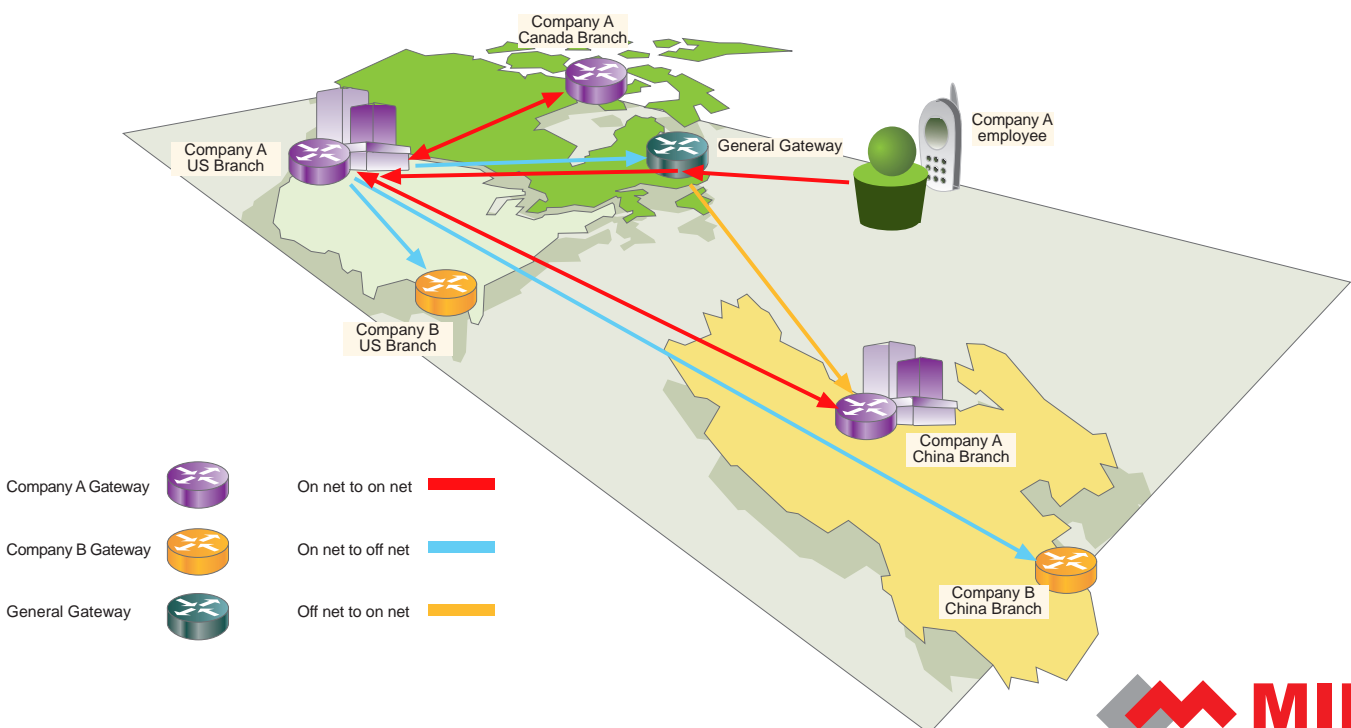

voice VPN, service providers can attract organizations and pull ahead of the competition in the highly competitive telecommunication and service provider market.

The MIND-iPhonEX real-time solution for voice VPN is a "must have" value-added service for providers targeting the enterprise market. It offers service providers the flexibility and innovative features needed to attract any-size enterprises.

Match tariffs to corporate needs

With MIND-iPhonEX, the service provider can define an unlimited number of VPNs and base VPN rates on the call type: on-net to on-net, on-net to off-net, etc. MIND-iPhonEX allows a provider to set special intra-company tariffs for calls from one company site to another.

MIND-iPhonEX's flexibility allows a provider to meet specific corporate needs according to the organizational structure, site locations and internal extensions dialing

MIND
NextGen Billing Solutions

plan. Providers can define Voice VPN tariffs according to calls' origination and termination locations, destination prefixes and/or dialed extensions. Different rates can be applied for each termination site, or alternately a single rate can be applied for all termination sites within the VPN.

The provider can charge a company one-time fees and recurring charges for the in-house equipment placed on the company's sites.

Network VPN and account VPN

VPN codes can be assigned to network elements up to the trunk level, to enable special VPN tariffs for calls originating and terminating within the VPN. MIND-iPhonEX allows the company to assign VPN codes for user-specific services to allow employees to call the VPN from remote locations outside of the VPN's network elements at the special intra-company tariff.

Flexible VPN tariffs

One of the important features of MIND-iPhonEX is the structure of its tariff system. The tariffs define all the parameters that compose the pricing of the service, such as usage quantifiers, recurring fees, QoS, discounts, special rates and so forth.

Rates can be varied within the company's organization. MIND-iPhonEX gives the user the ability to set different rates for different sites or departments within the company. Intra-company calls can be free of charge or at a reduced cost.

Different rates can be set according to termination site. For example, in a company with headquarters in New York and sales departments in the UK and Japan, the rates for a call from the headquarters to the sales departments can be lower than the rates for a call from one sales department to the other.

Different rates can be set for calls made to the VPN from outside the VPN and for calls made from the VPN to sites outside it. An employee calling the company can be charged a special rate.

Secure, selective VPN access authorization

MIND-iPhonEX enables companies to determine who gets authorization to use the VPN. The company can allow access to authorized users, trading partners and business associates while blocking access to non-authorized users who do not belong to the VPN.

Supports enterprises' advanced needs

MIND-iPhonEX is a scalable, reliable, and secure solution that makes it possible for service providers to cater to enterprises' advanced communication needs.

Enterprises would like all their various systems to suit their complex organizational hierarchies. MIND-iPhonEX enables providers to define unlimited levels of accounts within a business hierarchy to accommodate complex organizational and business models.

MIND-iPhonEX supports tunneled VPN (Cisco VPDN), allowing a remote user to access the enterprise's Intranet through a secured path.

The perfect solution

For service providers that provision Voice VPN, MIND-iPhonEX is the perfect solution to help them attract enterprises. It suits any enterprise hierarchy, no matter how complex. It is a reliable, robust, scalable, flexible solution that meets the demands of any enterprise customer.
